Numerical analysis for a growth model including a measure of stress

Julian Pohl

10.12.2024

I will start by introducing a model of a growing rod in one spatial dimension including a measure of stress and a nutrient concentration influencing the growth. A fully discrete system will be formulated, for which I show existence of a solution. After this, the goal is to prove linear convergence in space and time. At the end, we will look at some numerical simulations and experimental orders of convergence.
